

VIRAJ KALE

Full Stack Developer

📞 7219256638 | ✉ virajkale9604@gmail.com | 💼 [linkedin.com/virajkale9604](https://www.linkedin.com/virajkale9604) | 🐙 github.com/viraj-kale

Profile Summary

Full-Stack Developer with professional experience in building scalable web applications using **React, Java, Spring Boot, MongoDB** and **SQL**. Experience working on a live microservice-based system deployed on AWS, with experience in REST API development, database optimization, caching (Redis), and secure authentication. Able to develop end-to-end applications across Python, Java, MERN, and .NET stacks with a strong foundation in backend and full-stack development.

Technical Skills

Languages: Java, Python, C/C++, C#, JavaScript(ES6+), TypeScript.

Front-end: React.js, Angular (14+), Streamlit, HTML5, CSS3, Tailwind CSS, Material UI.

Back-end: .NET Core, Python, Java, Node.js, Express.js, FastAPI, REST API, JWT Authentication, JSON.

Tools & Technologies: Git, GitHub, Docker, Visual Studio Code, JUnit, Postman.

Cloud & Architecture: AWS, Cloud Run (GCP), Docker, Kubernetes, CI/CD, Firebase.

Databases: MySQL, SQL Server, MongoDB, PostgreSQL, Redis.

Software Engineering Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP), SOLID Principles, Design Patterns (Basic), SDLC, Agile (Scrum), Client-Server Architecture.

Experience

Pletra Technologies

Associate Software Engineer

March 2026 – Current

Pune

- Developed **customer-facing** ERP procurement modules using React, .NET 8, **Entity Framework**, and MongoDB, streamlining vendor, product, and quotation management workflows.
- Architected and developed an **AI-powered** vendor comparison microservice in **Python** using the Gemini API, reducing manual quotation evaluation time by approximately 80%.
- Designed and implemented secure RESTful APIs with **JWT access/refresh token** authentication, following **Dependency Injection (DI)** and clean architecture principles.
- Built optimized backend business logic using Entity Framework Core and LINQ, improving data access and performance for procurement operations.
- Deployed production-ready applications** by hosting the React frontend on **Nginx** and .NET backend services on **AWS**.
- Implemented **Model Context Protocol (MCP)** and prompt engineering techniques to generate consistent vendor recommendations based on delivery timelines, cost, shipping charges, vendor ratings, and quantity tolerance.
- Designed an **end-to-end AI procurement workflow** combining OCR, LLM reasoning, Python REST APIs, and .NET ERP integration, delivering automated supplier evaluation and decision support.

Resilinc Corporation

Analyst (Developer)

October 2021 – March 2026

Pune

- Developed and enhanced a multi-tier **Supply Chain Risk Intelligence SaaS platform** using React, Redux, .NET microservices, and Python enabling enterprise customers to monitor supplier disruptions across global manufacturing sites.
- Built **customer-facing dashboard** features in React for visualizing supplier locations, disruption events, and risk reports, improving the usability of real-time supply chain monitoring.
- Developed backend services and REST APIs using .NET, implementing business logic, authentication, and report generation workflows within a microservices architecture.
- Built **Python automation** services to process external event data such as earthquakes, severe weather, and other natural disasters, supporting automated disruption detection and reporting pipelines.
- Contributed to a **real-time event processing pipeline** that generated supplier disruption reports within minutes of major incidents based on configurable severity thresholds and business rules.
- Integrated automated notification workflows to deliver disruption reports through customer dashboards and email, enabling proactive supply chain risk management.

- Built Python automation services to process external event feeds (earthquakes, severe weather, and other disruption events), supporting near **real-time disruption detection and reporting**.
- Developed and maintained production features for a cloud-hosted application **deployed on AWS**, collaborating within Agile teams to deliver scalable, reliable, and high-availability services.

Projects

CritCash (Digital Wallet Payment Application) | React.js, Express.js, MongoDB, Redis, Node.js, TypeScript

Built a production-grade peer-to-peer digital wallet using the **MERN stack** (React, Node.js, Express.js, MongoDB), enabling secure money transfers, payment requests, **QR-based payments**, recurring autopay, and financial analytics. Designed and developed 25+ **RESTful APIs with Express.js**, implementing modular service-layer architecture for authentication, wallet management, transactions, analytics, payment requests, autopay scheduling, and admin operations. Implemented secure authentication using JWT, bcrypt, **role-based access control**, protected routes, and Redis-backed OTP password recovery with **automatic TTL expiration** for enhanced application security. Engineered automated recurring payment functionality by building a background scheduling service that executes and manages daily, weekly, monthly, and yearly wallet transfers without user intervention. Optimized backend performance using **Redis caching**, MongoDB indexing, service-layer business logic, and integer-based monetary calculations to ensure accurate and efficient financial transactions. Developed a responsive React 19 frontend with **React Router**, Tailwind CSS, **Axios interceptors**, **lazy loading**, **QR code scanning**, and interactive financial dashboards using Recharts, delivering a seamless cross-device user experience.

Interviews With AI (AI Powered Interview Application) | React.js, TypeScript, Python, Gen AI, Firebase

Built a full-stack AI hiring platform with seven specialized agents for resume analysis, job-fit scoring, bulk resume shortlisting, proctored AI interviews. Developed a **React 19 + TypeScript frontend** (Vite, Tailwind, React Router) with **JWT-based RBAC**, agent-level access control, and an HR portal for candidate registration, role management, domains, and job descriptions. Implemented a FastAPI (Python) backend using **Google Gemini for LLM workflows**, Firebase Firestore for users/interviews/feedback, and deployed on Google Cloud Run via Docker. The flagship AI Interview agent generates role-based questions, evaluates answers in real time, uses **MediaPipe proctoring** and speech-to-text, records sessions to GCS/Google Drive, and sends SMTP interview invites. Resume parsing supports PDF/DOCX/PPTX; shortlisting uses concurrent AI evaluation with CSV/PDF exports. Also integrated Microsoft Teams, Playwright E2E tests.

Education

Sinhgad College of Science, Pune

Masters of Computer Science - M.Sc (CS)	Aug 2023
---	----------

H.V Desai College, Pune

Bachelor of Mechanical Engineering	May 2021
------------------------------------	----------

Certifications

Google Project Management

Coursera	Dec 2025
----------	----------

MEAN / MERN Full Stack Development

FirstBit Solutions	Apr 2023
--------------------	----------
